According to this study, the global Power Tool Attachments market size will reach US\$ 35970 million by 2031.

Power tool attachments work with power tools, although not the main components but essential.

Rapid industrialization, along with the emerging trend of automation across the globe, is one of the key factors driving the growth. Furthermore, expansion in the construction and automotive industries is also providing a boost to the market growth. In line with this, there is a growing demand for fabricated metals, such as stamped metal products, fasteners and springs, which are manufactured using power tools, thereby increasing the utilization of power tool accessories. The widespread adoption of cordless power tools equipped with high-density Lithium-ion (Li-ion) batteries is also creating a positive impact on the market growth. In comparison to the traditionally used devices, cordless power tools, such as hammer drills, impact wrenches and circular saws, are more compact, mobile, multi-purpose and have a longer operational life. Other factors, including rapid urbanization, along with the development of smart technologies and low-cost and energy-efficient power tools, are projected to drive the market further.
