The global Power Transformer (Above 110kV) market size is predicted to grow from US\$ 32203 million in 2025 to US\$ 49927 million in 2032; it is expected to grow at a CAGR of 6.2% from 2026 to 2032.

Power Transformer (Above 110kV) refers to large power transformers used in high-voltage, extra-high-voltage, and ultra-high-voltage transmission networks. They are mainly used for generator step-up, regional grid interconnection, transmission voltage conversion, step-down transformation at backbone substations, long-distance power transmission, and grid connection of large industrial or renewable energy bases. This category mainly includes oil-immersed power transformers, autotransformers, generator step-up transformers, converter transformers, and phase-shifting transformers, covering voltage levels such as 110kV, 132/138kV, 220/230kV, 330/345kV, 400kV, 500/525kV, 750/765kV, 1000kV and above. Key technical indicators include rated voltage, rated capacity, short-circuit impedance, loss level, temperature rise, insulation margin, short-circuit withstand capability, partial discharge level, noise control, cooling method, and long-term reliability. Compared with distribution transformers, this product has higher unit value, stronger customization, more complex transportation and installation requirements, longer delivery cycles, stricter testing requirements, and stronger grid-safety attributes. It is a critical asset for transmission grid expansion, interconnection, and stable power-system operation.

The core drivers of the Power Transformer (Above 110kV) market come from rising electricity demand, transmission grid expansion and modernization, renewable energy integration, interregional power transmission, and replacement of aging grid assets. As wind, solar, hydro, nuclear, and large thermal power bases transmit electricity to major load centers, power systems need more step-up substations, collector substations,

backbone substations, and interregional transmission corridors, thereby increasing demand for high-voltage main transformers, generator step-up transformers, converter transformers, and autotransformers. The International Energy Agency has emphasized that expanding and modernizing transmission grids is essential for a secure, affordable, and sustainable power system, while rising electricity demand from industry, electric vehicles, air conditioning, and data centers further strengthens the need for backbone grid expansion.

The Global key players of Power Transformer (Above 110kV) include Hitachi Energy, TBEA Co., Ltd., Siemens, Jiangsu Huapeng Transformer, SGB-SMIT, etc. The top five players hold a share about 25%. China is the largest market, and has a share about 32%. In terms of product type, Power Grid is the largest segment, which occupied for a share of about 77%. For application, 110kV is the largest segment, which has a share about 41%.
