The global Power Transformers Monitors market size is predicted to grow from US\$ 2426 million in 2025 to US\$ 3548 million in 2031; it is expected to grow at a CAGR of 6.5% from 2025 to 2031.

A transformer is an electrical equipment that helps in varying the voltage of the electric current. This stepping up and stepping down of the voltage is especially important when a safe amount of electric current is required to be supplied to the end users. In order to ensure continuous and safe transmission of electricity from the power generation plant to the end users, the transformers utilized for this purpose have to be monitored continuously in real time. This is achieved by installing a transformer monitoring system within a transformer housing. Requirement of a transformer monitor is especially important when faults and anomalies within the grid or circuit have to be detected before the complete breakdown of the transformer occurs.

Power Transformer Monitors is mainly manufactured and sold by GE, Hitachi Energy, Siemens, Eaton, Doble Engineering Company, Weidmann, Vaisala, Mitsubishi, Qualitrol, Koncar, Schweitzer Engineering Laboratories and LGOM ; and top ten companies occupied about 71.0% market share in 2022.
