The global Power Transmission & Distribution (T&D) Systems market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Power Transmission & Distribution (T&D) Systems are essential infrastructure for delivering electricity from generation sources to end users. Transmission systems transport high-voltage electricity over long distances from power plants to substations using transmission lines and towers. Distribution systems then step down the voltage and distribute electricity through local networks to homes, businesses, and industries. These systems include components such as transformers, substations, distribution lines, and circuit breakers. T&D systems are designed to ensure efficient, reliable, and safe delivery of electrical power, managing the flow of electricity to meet varying demands and maintaining the stability and resilience of the electrical grid.
