According to this study, the global Powered Ground Support Equipment market size will reach US\$ 2350 million by 2031.

Ground Support Equipment (GSE) is the support equipment found at an airport, usually on the apron, the servicing area by the terminal. This equipment is used to service the aircraft between flights. As the name suggests, ground support equipment is there to support the operations of aircraft whilst on the ground. This report focus on Powered Ground Support Equipment market.

Increasing number of air passengers and high expenditure by airport authorities on eco friendly ground support equipment to improve their operational efficiency are some of the factors driving the market. Deploying new electric GSE (eGSE) technologies is a promising opportunity in part because the purchasers are generally large, technologically sophisticated airlines, contractors, or airports with centralized procurement and maintenance departments. GSE can be particularly well-suited for electrification because it benefits from low-end torque and has frequent start/stops, idle time, and short required ranges.
