The global Powered Pallet Conveyors market size is predicted to grow from US\$ 1479 million in 2025 to US\$ 2112 million in 2032; it is expected to grow at a CAGR of 5.3% from 2026 to 2032.

Electric pallet conveyors are logistics conveying equipment driven by electric motors, automatically conveying, transferring, accumulating, sorting, and positioning pallets and their loaded goods. Powered by rollers, chains, belts, or modular conveyor units, this equipment enables continuous automated transport of pallets between production lines, warehousing systems, and logistics centers, and is a crucial component of modern intelligent warehousing and industrial automated logistics systems.

The upstream of the industry chain mainly includes suppliers of structural materials such as steel, stainless steel, and aluminum profiles, as well as manufacturers of core components such as motors, reducers, drive rollers, chains, bearings, frequency converters, servo systems, PLC controllers, sensors, and industrial automation software. The midstream consists of electric pallet conveyor equipment manufacturers and logistics automation system integrators, responsible for pallet conveyor equipment design, power conveyor module manufacturing, control system development, complete line integration, and installation and commissioning, resulting in products such as roller pallet conveyors, chain pallet conveyors, transfer conveyors, accumulation conveyors, and automated pallet conveying systems. The downstream is mainly used in automated warehouses, logistics distribution, and manufacturing production lines.

In 2025, the global sales volume of electric pallet conveyors will reach 54,000 units, with a production capacity of approximately 77,000 units, an average selling price of US\$28,000 per unit, and an average gross profit margin of 20%-30%.

Global policies promoting smart manufacturing, intelligent logistics, and digital supply chain upgrades continue to drive industry development. European and American countries are promoting investment in warehouse automation through Industry 4.0 strategies and supply chain modernization plans, while China is driving the upgrading of logistics equipment through smart manufacturing, the construction of modern logistics systems, and new industrialization policies. In recent years, e-commerce logistics infrastructure construction, cold chain logistics development, and the expansion of the new energy industry have become market hotspots. Meanwhile, rising labor costs and enterprises' demands for cost reduction and efficiency improvement have further increased the return on investment for automated logistics equipment, accelerating the market penetration of electric pallet conveyors.
