The global Powered Paragliding market size is predicted to grow from US\$ 1040 million in 2025 to US\$ 1551 million in 2031; it is expected to grow at a CAGR of 6.9% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Powered paragliding, also known as paramotoring or PPG, is a form of ultralight aviation where the pilot wears a back-mounted motor (a paramotor) which provides enough thrust to take off using a paraglider. It can be launched in still air, and on level ground, by the pilot alone — no assistance is required.

In many countries, including the United States, powered paragliding is minimally regulated and requires no licence. The ability to fly both low and slow safely, the 'open' feel, the minimal equipment and maintenance costs, and the portability are claimed to be this type of flying's greatest merits.
