The global Powerful Film Rolling Machine market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The powerful film rolling machine is a kind of equipment used for lithium battery manufacturing. It can use the roller mechanism to provide large pressure to roll the coated pole pieces to increase the density and quality of the pole pieces. The main features of the powerful film rolling machine are: stable tension control system to ensure the flatness and uniformity of the pole pieces. High-precision rolling force control level enables precise control of the thickness and density of pole pieces. Various types of equipment configurations can meet customers with different production capacity needs. The surface of the roller is electroplated with hard chromium to improve the hardness and wear resistance of the roller and reduce the wear of the pole piece coating. Optional hot rolling technology reduces the brittleness of the pole piece coating and improves rolling quality.
