The global PP Non-woven Fabric market size is predicted to grow from US$ 14640 million in 2025 to US$ 18680 million in 2031; it is expected to grow at a CAGR of 4.1% from 2025 to 2031.

PP nonwoven fabric is a thermoplastic material with excellent comprehensive performance; moreover, it is small in density, easy to produce and has low production costs. However, it also has some defects, such as a low melting point, low thermal deformation temperature, poor creep-resistant performance, poor dimensional stability, low temperature brittleness, etc.

On the other hand, PP nonwoven fabric itself is resistant to erosion by mildew, but it cannot directly kill it. Furthermore, its side-chain polymers have flexible molecule chains and are non-polar, with the latter attribute making it difficult to blend with other polymers, and the weak molecule combination making its heat resistance poor. Thus, in order to expand the functions of PP nonwoven fabrics, it is necessary to modify and process it.

Global PP Non-woven Fabric main players include AVINTIV, Kimberly-Clark, AVGOL, First Quality, Toray, etc., totally accounting for about 22% of market. Europe is the largest market of PP Non-woven Fabric, with a share over 21%. As for the types of products, it can be divided into Meltblown PP Non-woven Fabric, Spunbonded PP Non-woven Fabric, Staples PP Non-woven Fabric and Others. The most common product is Meltblown PP Non-woven Fabric, with a share over 47%. In terms of applications, it is widely used in Hygiene, Construction, Geotextile, Filtration, Automotive and Others.
