The label PP-RCT was determined according to ISO 1043-1, where the letter 'R' indicates the structure of random copolymer polypropylene, letter 'C' stands for crystalline structure in particular, a symbol 'T' stands for improved hydrostatic strength at elevated operating temperatures. Pipes made of copolymer PP-RCT are intended to be used for the transport of cold and hot water, where this material showed remarkable resistance to internal pressure in the application of low and high temperature. In addition, due to its exceptional resistance to environmental stress cracking, the copolymers of this product are used to produce pipe systems in the industry with a high corrosive level of water.
