Abstracts

According to this study, the global PP Sheet Extrusion Production Line market size will reach US$ 6269 million by 2031.

A PP (polypropylene) sheet extrusion production line is a specialized manufacturing system designed to produce PP sheets with specific thickness, width, and properties.

The production line typically consists of the following key parts, each playing a crucial role in the extrusion process:

1.Feeding System

Hopper: Stores PP resin pellets, often equipped with a drying device to remove moisture and prevent defects in the sheet.

Feeder: Accurately controls the feeding rate of PP pellets into the extruder, usually via a screw or gravimetric feeder.

2.Extrusion System

Extruder: The core component, containing a screw and a heated barrel. The screw rotates to transport, melt, and plasticize the PP pellets. Heaters around the barrel maintain the optimal temperature (typically 180–250°C) for melting PP.

Screen Changer: Filters impurities and ensures the melt quality by removing contaminants from the PP melt.

Molding System

Die Head: Shapes the melted PP into a continuous sheet. The die head design (e.g., T-die) determines the width and thickness uniformity of the sheet.

Calender Rollers: Cool and calibrate the extruded sheet to achieve the desired thickness and surface finish. These rollers are temperature-controlled to solidify the PP quickly.

3.Cooling System

Cooling Rollers or Bath: Further cools the sheet to stabilize its dimensions and properties, preventing warping or deformation.

4.Take-off and Cutting System

Traction Device: Pulls the cooled sheet at a consistent speed, maintaining tension to avoid wrinkles.

Cutter or Winders: Cuts the sheet into specified lengths (for flat sheets) or winds it into rolls (for coil sheets), with precision cutting mechanisms to ensure size accuracy.

Control System

PLC (Programmable Logic Controller): Manages and coordinates all components, controlling parameters like temperature, speed, and pressure.

HMI (Human-Machine Interface): Allows operators to monitor and adjust the production process.
