PP VCI shrink film is a packaging material made from polypropylene (PP) and enhanced with volatile corrosion inhibitors (VCI). This film is designed to provide both durable physical protection and effective corrosion prevention for metal products. When heated, the film shrinks tightly around the item, conforming closely to its shape and forming a secure, moisture-resistant barrier. The VCI additives within the film release vapor molecules that adhere to the surface of the metal, creating a protective layer that prevents rust and oxidation. PP VCI shrink film is commonly used in industries such as automotive, aerospace, and metalworking, where metal parts and components need reliable protection against environmental elements that can cause corrosion during storage and transportation. Its high strength and resistance to tearing make it ideal for heavy-duty applications.

The global PP VCI Shrink Film market size is projected to grow from US\$ 118 million in 2024 to US\$ 170 million in 2030; it is expected to grow at a CAGR of 6.2% from 2024 to 2030.
