PPR aluminum-plastic pipe is a multi-layer composite pipe, usually composed of two layers of polypropylene random copolymer (PP-R) inside and outside and a thin layer of aluminum alloy in the middle, which are bonded by hot melt adhesive to form an overall structure. This design combines the flexibility of plastic with the strength of aluminum, and has excellent pressure resistance, high temperature resistance, oxidation resistance and dimensional stability. The aluminum layer effectively blocks oxygen penetration and prevents system corrosion. It is suitable for hot and cold water transportation, heating systems and industrial fluid transportation. Its thermal expansion coefficient is much lower than that of ordinary PPR pipes, which can significantly reduce the deformation problem caused by thermal expansion and contraction and extend the service life of the system.

United States market for PPR Aluminum Plastic Pipe is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
