PPR glass fiber reinforced composite pipe is a three-layer structure pipe made of polypropylene random copolymer (PP-R) and glass fiber composite material. Its inner and outer layers are PP-R materials, and the middle layer is a glass fiber reinforced layer, which is formed in one step by co-extrusion process. This structure significantly improves the pressure resistance, heat deformation resistance and dimensional stability of the pipe, while maintaining the advantages of PP-R materials such as corrosion resistance, non-toxicity, environmental protection, and hot melt connection. Compared with traditional PP-R pipes, its linear expansion coefficient is reduced by about 70%, which is more suitable for high temperature and high pressure environments, and is widely used in building water supply and drainage, HVAC, industrial transportation and other systems.

United States market for PPR Glass Fiber Reinforced Composite Pipe is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
