The global PPS Material market size is predicted to grow from US\$ 1321 million in 2025 to US\$ 1732 million in 2032; it is expected to grow at a CAGR of 3.8% from 2026 to 2032.

In 2025, global PPS Material production reached approximately 188 kilotons?with an average global market price of around US\$ 7,200 per ton, and a gross profit margin of approximately 20%-40%. The full name of PPS material is Polyphenylene Sulfide. PPS has excellent heat resistance, chemical stability and electrical properties, so it is widely used in many high temperature and corrosive environments. Common PPS materials include PPS resin and PPS filaments, etc. PPS materials also exhibit good mechanical strength and wear resistance, making them a popular engineering plastic choice.

Polyphenylene sulfide (PPS) materials occupy a strategic niche in high-performance engineering thermoplastics, positioned where customers need a balance of heat resistance, chemical stability, dimensional accuracy, and long service life—often in environments that punish more common plastics. Demand is anchored in electrification and electronics (connectors, high-temperature housings, insulation and coil bobbins, sensor components), automotive under-hood and drivetrain applications, industrial fluid-handling and chemical-contact parts (pumps, valves, fittings), and filtration media where PPS fibers and needle felts are valued for thermal and chemical durability in harsh gas streams. On the supply side, the value chain spans base PPS polymer production, compounding and customization, conversion into forms like powders, films, and fibers, and finally precision molding or fabrication into end parts—so growth is influenced not only by polymer output but also by downstream conversion capacity and qualification cycles. Key trends include higher-performance formulations for smaller, lighter, and hotter-running electrical systems, increasing use in EV power electronics and charging-related hardware, continued substitution of metals in corrosion-prone industrial assemblies, and broader adoption of standardized compounds that simplify multi-site

manufacturing. Overall, PPS is less of a commodity growth story and more a materials platform sustained by engineering specifications, reliability expectations, and the steady expansion of harsh-environment applications.
