The global Pradefovir Mesylate Tablets market size is predicted to grow from US\$ 24.46 million in 2025 to US\$ 101 million in 2032; it is expected to grow at a CAGR of 7.0% from 2026 to 2032.

Pradefovir Mesylate Tablets are a novel liver-targeted nucleoside reverse transcriptase inhibitor indicated for the treatment of chronic hepatitis B. It exerts potent and sustained antiviral activity by inhibiting hepatitis B virus DNA replication following liver-specific metabolic activation. Designed with liver-targeted prodrug technology, this agent significantly increases drug concentration in the liver while reducing systemic exposure, thereby improving renal and skeletal safety issues associated with long-term use of traditional nucleoside analogs. It provides a safer first-line therapeutic option for patients with renal insufficiency or renal injury risk, featuring strong targeting, favorable safety profile, and good clinical compliance. In 2025, global Pradefovir Mesylate Tablets production reached approximately 2.1 million bottles.

Pradefovir Mesylate Tablets is a domestically innovated liver-targeted antiviral drug for chronic hepatitis B. With its core advantages of liver targeting and high safety profile in terms of renal and bone toxicity, it has established differentiated competitiveness in the long-term treatment of chronic hepatitis B. The drug has been included in the national medical insurance catalogue, which significantly lowers the financial barrier for patients and drives rapid growth in its clinical penetration. In the market, it is precisely positioned for patients at risk of renal injury caused by traditional nucleoside analogues and elderly populations. Supported by medical insurance policies, clinical guideline recommendations and academic evidence, it is gradually gaining share in first-line treatment. The overall market is in a transitional stage from introduction to growth phase. Its future growth momentum will mainly come from deeper insurance coverage,

increased physician awareness, expanded indications and overseas market potential, while it also faces multiple challenges such as competition from existing first-line drugs, pricing pressure from generics and continuous innovation in new drug research and development.
