PrEP, or pre-exposure prophylaxis, is a medicine to prevent HIV. People who are not infected with HIV can take this medicine to decrease the risk of contracting HIV if they get infected with the virus. PrEP is used to stop HIV from spreading throughout one's body. At present, only two daily oral PrEP medications are FDA-approved. Truvada and Descovy are the drugs approved by the FDA for oral usage. Physicians prescribe PrEP to adults and adolescents who are HIV negative and at a higher risk of getting HIV due to sex or injection use.
