The global Pre-galvanized Steel Pipe market size is predicted to grow from US\$ 27776 million in 2025 to US\$ 38964 million in 2032; it is expected to grow at a CAGR of 5.0% from 2026 to 2032.

Pre-galvanized Steel Pipe refers to steel pipes manufactured from pre-galvanized steel strip or sheet that has been coated with a zinc layer before pipe forming. The strip is typically galvanized through a continuous hot-dip galvanizing process, then roll-formed and welded into pipes (usually via ERW?Electric Resistance Welding). The zinc coating provides corrosion resistance, improved durability, and extended service life, making these pipes suitable for structural, fluid-transport, and construction applications. The supply chain begins upstream with iron ore mining and steelmaking, followed by hot-rolled coil production and cold rolling, then continuous galvanizing lines (zinc coating) that produce pre-galvanized steel strip. In the midstream stage, pipe manufacturers perform roll forming, welding, sizing, cutting, and surface finishing to produce the final pipes. Downstream distribution involves steel service centers, construction material distributors, and OEM manufacturers, supplying industries such as construction scaffolding, greenhouse frames, fencing systems, HVAC ducting, electrical conduits, agricultural irrigation, and light structural engineering. In 2025, global Pre-galvanized Steel Pipe output was about 24 million tons with 40 million tons of capacity, average prices of USD 1,090 ? 1,450 per ton, and gross margins around 11%.
