The global Pre-hardened Mould Steel market size is predicted to grow from US\$ 5440 million in 2025 to US\$ 6531 million in 2032; it is expected to grow at a CAGR of 2.7% from 2026 to 2032.

In 2024, global Pre-hardened Mould Steel production reached approximately 2.0 million tons, with an average global market price of around US\$ 2,700 per ton.

The gross profit margin of major companies in the industry is between 22%—35%.

Pre-hardened mould steel is a type of alloy steel that has been heat-treated to a specific hardness level before delivery, eliminating the need for further quenching or tempering. It is widely used in plastic injection molds, die casting molds, and tooling applications. With good machinability, wear resistance, and dimensional stability, pre-hardened mould steel enables faster mold manufacturing and extended service life.

The market for pre-hardened mould steel is driven by the growth of the automotive, consumer electronics, and packaging industries, all of which rely heavily on plastic injection molding and die casting. Increasing demand for high-performance materials with better wear resistance and machinability supports market expansion. Technological advancements in alloy compositions and heat-treatment processes improve product quality and consistency. Asia-Pacific remains the largest consumer region due to strong manufacturing bases in China, Japan, and South Korea. Overall, the market will continue to grow steadily, aligned with industrial automation and lightweight product trends.
