Precast concrete drainage channels, also known as precast concrete trench drains or precast concrete channel drains, are modular components used to manage surface water runoff and provide effective drainage solutions in various construction and outdoor environments. These premanufactured drainage systems consist of interlocking or modular units made from concrete, which are designed to efficiently collect, convey, and direct rainwater away from paved surfaces, preventing water accumulation and potential damage.

The ongoing trend of urbanization and infrastructure development, particularly in rapidly growing cities, has led to an increased demand for efficient stormwater management solutions. Precast concrete drainage channels play a crucial role in managing surface water runoff in urban environments.
