Precast Concrete Hollow Core Slab Extrusion Production Line is an integrated manufacturing system used to produce prestressed hollow core concrete slabs through continuous extrusion or slipforming. It typically includes concrete batching, strand tensioning, extrusion forming, cutting, curing, lifting and handling equipment. The line is used in precast plants serving residential buildings, commercial floors, parking structures, industrial buildings and modular construction. The market includes complete extrusion lines and key integrated production systems, but excludes ordinary concrete mixers, standalone molds and finished precast slabs.

The industry chain includes steel structures, hydraulic systems, extrusion machines, prestressing equipment, cutting machines, concrete batching systems, electrical controls, sensors, curing systems and plant handling equipment. Midstream production covers mechanical design, component machining, equipment assembly, automation

integration, trial production and installation commissioning. Downstream demand comes from precast concrete plants, building contractors, industrial construction, modular housing, parking facilities and infrastructure projects. Growth is driven by prefabricated construction, labor reduction, faster project delivery, standardized floor systems and industrialized building production.
