The global Precession Flowmeter market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

The precession flowmeter is a flowmeter used to measure fluids such as liquids, steam and gases.

The flow rate is measured based on the principle that the vortex frequency generated when the fluid passes through an obstruction (such as a rod-shaped obstacle) is proportional to the flow rate.

The precession flowmeter combines next-level high accuracy, short front and rear straight pipe sections with the solid reliability of a vortex flowmeter, providing reliable and outstanding performance in liquid, gas and steam measurement.
