A Precious Metal Multiphase Catalyst refers to a catalyst system that utilizes precious metals, such as platinum, palladium, or gold, dispersed on a support material to catalyze reactions between two or more phases. Multiphase catalysis is a process in which at least two different phases, such as solid, liquid, or gas, are present in a reaction mixture. The support material is usually a porous solid material, such as

activated carbon or alumina, which provides a high surface area for the dispersion of the precious metal catalyst.
