The global Precious Metal Porcelain Crown market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Precious metal porcelain crowns are a type of porcelain teeth, consisting of two layers: the inner precious metal base crown and the outer porcelain layer. Precious metal base crowns are usually made of rare metals such as gold, silver, platinum or their alloys. These metals have good chemical inertness, anti-oxidation and anti-corrosion capabilities, and excellent biocompatibility. Commonly used precious metal materials in precious metal porcelain crowns include gold alloys, silver-palladium alloys, etc. Among them, gold alloy porcelain crowns are highly praised for their natural color, good biocompatibility, and strong corrosion resistance. The gold content in gold alloy porcelain crowns is usually high, which can reach more than 86%. At the same time, it contains a small amount of rare metals such as palladium and platinum to improve the strength and stability of the alloy. Precious metal porcelain crowns are mainly used to repair symptoms such as tooth defects, tooth discoloration, and tooth loss. In the field of oral restoration, precious metal porcelain crowns are widely used because of their excellent performance and aesthetic effects. However, it should be noted that the price of precious metal porcelain crowns is relatively high, and patients should make comprehensive considerations based on their own economic conditions and needs when choosing.

Precious metal porcelain crowns are favored by more and more patients due to their good biocompatibility, aesthetics and durability. There are differences in the demand for precious metal porcelain crowns among different consumer groups, including price sensitivity, brand preference, and purchasing channels. Precious metal porcelain

crowns are mainly used in the fields of tooth restoration and permanent tooth replacement. As people's awareness of oral health increases, the demand in these fields will continue to grow. In addition, with the continuous advancement of medical technology, the manufacturing process and material selection of precious metal porcelain crowns are constantly innovating. The application of new technologies such as digital design and 3D printing has improved the accuracy and aesthetics of the products. In the future, with the aging of the population and the improvement of oral health awareness, the precious metal porcelain crown market will continue to grow. At the same time, the continuous emergence of new technologies and new materials will also bring new growth points to the market.
