Precisely Humidified Fiber Sheet is a pad made from functional fibers or fiber substrates encapsulating humidity-regulating agents; it reversibly adsorbs and desorbs moisture to maintain a target relative humidity in closed spaces, used for electronics, collections, pharmaceuticals, and packaging.

In 2024, global Polymer Humidity Control Sheet production reached approximately 11.85 million Pcs, with an average global market price of around US$27 per Pc. This product typically has a single-line production capacity of approximately 50,000–100,000 pieces per year, with an industry gross profit margin of approximately 25%–35%. Raw materials account for the largest portion of the cost structure (approximately 65%), followed by manufacturing overhead (including labor and energy consumption). The upstream segment of this product is functional fibers, humidity control agents, and auxiliary materials, while the downstream segment serves the electronics, cultural relic preservation, pharmaceutical, and food packaging industries.
