Precision lapping film is a high-performance abrasive product used for achieving extremely fine, uniform surface finishes and tight tolerances on materials such as metals, ceramics, glass, and plastics. It consists of a polyester backing coated with precisely graded abrasive particles—such as aluminum oxide, silicon carbide, or diamond—bonded with a resin. Unlike traditional sandpaper, lapping film offers consistent abrasive size and distribution, resulting in predictable, repeatable polishing or grinding performance. It is commonly used in industries like electronics, optics, aerospace, and automotive for tasks such as fiber optic connector polishing, tool sharpening, and surface finishing.
