The global Precision Roll Forming Machine market size is predicted to grow from US$ 532 million in 2025 to US$ 687 million in 2031; it is expected to grow at a CAGR of 4.4% from 2025 to 2031.

Not only a roll forming machine can provide high quality products, but also decrease the human labour, time and increases the profit of business, thanks to the automation or continuous running. Other than roll forming, these machines perform a number of metalworking duties, including material cutting and roll punching.Compared to regular metal fabrication equipment, like sheet metal press brake, metal sheet shearing machine, press machine, and straightening machine etc, a roll former line usually can do all the jobs, like bending, cutting, pressing for holes, straightening and even stacking.

China is the largest market for roll forming machines, followed by North America. Roll forming machines and production lines are divided into machines and production lines based on product type. The segment of roll forming lines dominates the market. Roll forming machines are mainly used in industries such as automobiles and building materials; the automobile field is the largest application field.
