The global Preclinical Small Animal Imaging System market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

The small animal in vivo optical imaging system is a cutting-edge pre-clinical molecular imaging platform that takes molecular and cell biology technology from the in vitro level to the live animal level. The technology uses bioluminescence and fluorescent probes to label study subjects and, with the aid of sensitive optical detection instruments, directly monitors disease development and conducts pre-clinical development of relevant drugs at the live animal level.

According to Our PET Supplies Research Center, the global pet industry reached \$ 261 billion in 2022, a year-on-year increase of 11.3%. The United States gains the highest pet penetration rate and becomes the largest pet market. According to the American Pet Products Association (APPA), 66% of American households keep pets, and the total industry sales was about US\$136.8 billion, an increase of 10.8% over 2021. According to IVH, the German pet products industry association, the number of pets in Germany reached 33.4 million in 2022, with a total turnover of nearly €6.5 billion. The 2023 China Pet Industry Trend Insight White Paper released by JD shows that the market size of the four major pet physical commodities is increasing year by year: pet supplies account for 45%, pet staple food accounts for nearly 35%, pet snacks account for 12%, and pet medicine and health care account for 295%.
