## Abstracts

The global Prefabricated Underground Substation market size is predicted to grow from US\$ 991 million in 2025 to US\$ 1285 million in 2032; it is expected to grow at a CAGR of 3.7% from 2026 to 2032.

In 2025, the global production of prefabricated underground substations reached 84,381 units, with an average selling price of US\$12,000 per unit. The global annual production capacity of prefabricated underground substations is approximately 120,000 units, with a gross profit margin of approximately 23.7%. Prefabricated underground substations are a power station solution that involves prefabricating key electrical equipment (such as transformers, switches, and busbars) in a factory and arranging them underground or below ground level. They achieve equipment installation and integration underground in a modular, chambered manner, significantly saving surface space, improving aesthetics and safety, while enhancing reliability through enclosure, waterproofing, and fireproofing measures. Maintenance and repair are achieved through shafts and access panels, making them suitable for densely populated urban areas, landscape protection zones, and power distribution/voltage boosting scenarios requiring rapid, large-scale expansion. The upstream of the prefabricated underground substation industry chain includes metal materials and foundation components, electrical equipment and modular units, cables and communication systems, etc.; the midstream consists of prefabricated underground substation manufacturers; and the downstream is mainly used in municipal engineering, transportation, and new energy sectors.

United States market for Prefabricated Underground Substation is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
