The global Preformed Fittings for Optical Cables market size is predicted to grow from US\$ 401 million in 2025 to US\$ 629 million in 2032; it is expected to grow at a CAGR of 7.0% from 2026 to 2032.

Preformed Fittings for Optical Cables are helical hardware assemblies used for the installation, anchoring, suspension, protection and vibration control of OPGW, ADSS, OPPC and selected aerial optical-fiber cables. They are composed of preformed rods, structural reinforcing rods, armor rods, dead-end rods, suspension rods, spiral vibration dampers and related connection hardware. By distributing clamping force over a long helical contact length, these fittings reduce localized crushing, jacket damage, fiber-unit stress and fatigue under wind, ice, long-span and high-electric-field operating conditions. Major upstream inputs include aluminum-clad steel wire, galvanized steel wire, aluminum-alloy wire, stainless steel, zinc-aluminum coatings, elastomeric inserts, engineering plastics and steel connection hardware. Downstream applications include transmission-line communications, dispatch automation, relay protection, substation communication, renewable-energy export lines, distribution fiberization and grid refurbishment.

In 2025, global preformed fittings for optical cables production reached approximately 8 million units, with an average global market price is \$50 per unit.
