Preloaded IOL Injectors are specialized medical devices used in cataract surgery to implant intraocular lenses into the eye. These injectors come preloaded with the IOL, which simplifies the procedure, reduces the risk of contamination, and improves surgical efficiency. The preloading of the lens into the injector means that the lens is already in a sterile environment and ready for implantation, minimizing the handling required by the surgeon. This streamlined process enhances precision and reduces the potential for complications during the lens implantation phase of cataract surgery.
