The global Premix for Shrimp and Crab market size is predicted to grow from US\$ 399 million in 2025 to US\$ 550 million in 2032; it is expected to grow at a CAGR of 4.8% from 2026 to 2032.

In 2025, global production of premix for shrimp and crab reached approximately 286,400 metric tons, with an average selling price of around USD 1,420 per ton. Premix for shrimp and crab is an aquafeed intermediate product primarily composed of vitamins, minerals, and essential trace nutrients, designed for formulated feeds used in shrimp and crab farming. Incorporated at low inclusion rates, this type of premix provides fundamental nutritional supplementation, dietary balance, and growth support, serving as an essential building block within industrialized crustacean aquaculture feed systems.

At present, the premix for shrimp and crab market remains moderate in scale, with demand closely tied to global shrimp and crab farming output and the level of feed industrialization. Market conditions indicate that supply is dominated by specialized aquaculture premix producers and large aquafeed groups, while downstream customers prioritize product consistency, formulation compatibility, and long-term farming performance over price competition. In terms of trends, rising farming density and disease risks are driving gradual improvements in formulation stability and nutritional precision, while the functional scope remains focused on basic nutrition, clearly differentiated from composite or functional premixes. Market perspectives suggest that premix for shrimp and crab represents a relatively mature segment characterized by stable demand rather than rapid expansion.
