The presbyopia contact lens is a type of contact lens designed exclusively to correct presbyopia. Presbyopia is a physiological phenomenon where, as age increases, the lens of the eye gradually hardens and loses elasticity, and the function of the ciliary muscle also diminishes, resulting in a gradual decline in the eye's accommodative ability and making it difficult to see objects up close. This contact lens employs a special multifocal or varifocal design, which differs from single-focus contact lenses by providing multiple distinct refractive zones on a single lens. This helps wearers achieve clearer vision when viewing both near and distant objects.
