The global Presbyopia Correction Devices market size is predicted to grow from US\$ 28.4 million in 2025 to US\$ 79.4 million in 2031; it is expected to grow at a CAGR of 18.7% from 2025 to 2031.

Presbyopia Correction Device general has two types: corneal inlay and scleral implants.

A corneal inlay (also called an intracorneal implant) is a device which is surgically implanted in the cornea of the eye as a treatment for presbyopia. Successful installation results in reducing dependence on reading glasses, so that the user can more easily engage in everyday tasks such as using a mobile phone, reading store shelf prices and working on a computer.

Corneal inlays are small, thin, and permeable. Typically one is implanted in the non-dominant eye.

Scleral implants are precision-molded from a clear plastic material; the clear implants are about the size of a grain of rice and are placed just below the surface of the white of your eye (called the sclera). The only one commercially available is VisAbility™ Micro-Insert System.

Europe is the largest Presbyopia Correction Devices market with about 45% market share. United States is follower, accounting for about 32% market share.

The key players are AcuFocus, Revision Optics (Closed in Feb 2018), Refocus, Presbia

etc. Top 3 companies occupied about 99% market share.
