Prescription headache medicines are medications that require a prescription from a healthcare professional to obtain. These medicines are typically used for the treatment of moderate to severe headaches or migraines that may not be effectively relieved by over-the-counter options.

Headaches and migraines are common conditions affecting a significant portion of the population. The increasing prevalence of these conditions drives the demand for prescription headache medicines as individuals seek effective treatment options to manage their symptoms. While over-the-counter medications can provide relief for many individuals with mild headaches, there is a substantial population that experiences moderate to severe headaches or migraines that require stronger prescription medications. The unmet medical needs of this population drive the demand for prescription headache medicines.
