The global Presence/Motion Detectors market size is predicted to grow from US\$ 3024 million in 2025 to US\$ 4634 million in 2032; it is expected to grow at a CAGR of 6.4% from 2026 to 2032.

Presence/motion detectors are devices that use sensing technology to detect the presence of a person, and are widely used in smart homes, security systems, and energy-saving control. They sense a person's thermal radiation, movement, or subtle life signs, such as breathing and heartbeat, through technologies such as infrared sensors, ultrasonic sensors, or microwave radars. When a person's presence is detected, the device can trigger corresponding actions, such as lighting up lights, adjusting the temperature, or sending an alarm signal, thereby achieving automated and intelligent management.

The presence/motion detector market is a rapidly growing sector driven by several drivers, including:

1. Increased demand for security and surveillance

As security awareness rises globally, the demand for security and surveillance equipment in residential, commercial and industrial sectors continues to grow. Motion detectors are widely used for intrusion detection, home security systems and smart monitoring.

2. Popularity of smart homes

The rapid expansion of the smart home market has driven the demand for

presence/motion detectors. These devices are often integrated with smart lighting, thermostats and appliances to provide greater convenience and energy savings.

3. Energy efficiency and energy conservation needs

In buildings and facilities, motion detectors are used to control lighting and heating, ventilation and air conditioning (HVAC) systems, thereby reducing energy waste and improving efficiency, especially in green buildings.

4. Technological advancements

Continuous technological advancements, such as AI-based sensors and multi-function integration, have made motion detectors more accurate and reliable, while also supporting remote monitoring and control through the Internet of Things (IoT).

5. Government regulations and policy support

Governments around the world have created favorable conditions for the expansion of the presence/motion detector market by promoting the adoption of energy-saving and environmentally friendly technologies through legislation, such as smart building regulations.

6. Applications in commercial and retail environments

In the retail and commercial sectors, motion detectors are used for automatic doors, lighting control, and customer behavior analysis, improving operational efficiency and customer experience.

7. Needs of an aging population

For the elderly care and healthcare industries, presence/motion detectors can help monitor the activities of the elderly, prevent accidents, and improve the quality of medical services.

8. Industrial automation

The Industrial 4.0 trend has driven the development of industrial automation. Motion detectors are used in factory and warehouse automation to detect mobile devices and

workers, improving safety and efficiency.
