Preservative-Free Artificial Tears are eye drops that are used to relieve dryness and discomfort in the eyes. They are specifically designed for individuals who are sensitive to preservatives commonly found in other eye drops. These eye drops are commonly used to lubricate and moisturize the eyes, providing temporary relief from symptoms such as dryness, burning, itching, and irritation. They can be used by individuals experiencing dry eye syndrome, environmental factors (such as wind or dry air), prolonged screen time, contact lens wearers, or those recovering from eye surgery.

The market for preservative-free artificial tears is expected to experience significant growth in the coming years. Artificial tears are lubricating eye drops that help alleviate dryness and discomfort caused by insufficient tear production or poor tear quality. The preservative-free artificial tear market is expected to grow significantly due to factors such as the increasing prevalence of dry eye syndrome, rising awareness, advancements in formulation and delivery systems, the aging population, and the expansion of e-commerce platforms. The market presents opportunities for manufacturers to develop innovative products and expand their market presence.
