With growing demand in downstream market, the Press Fit Machines is forecast to a readjusted size of US$ 120.9 million by 2030 with a CAGR of 4.1% during review period.

The research report highlights the growth potential of the global Press Fit Machines market. Press Fit Machines are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Press Fit Machines. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Press Fit Machines market.

Press-fit technology is that inserting flexible or rigid pins of connectors into plated through holes (PTHs) of printed circuit board (PCB) without soldering. It is reliable and easy to operate. The basic requirement is that the diameter of press-fit zone must be greater than the diameter of PTH. During the press-fit process, there is deformation of the pin. Thus, the pin slides into the hole and is connected with the PTH tightly.

Press Fit machines bring enhanced levels of control and force measurement that improve efficiency and yields in the manufacturing and assembly of printed circuit boards.

Global Press Fit Machines key players include TE Connectivity, Eberhard, Lazpiur, UMG Technologies, SYNEO, etc. Global top five manufacturers hold a share over 60%.
