The global Pressure Aging Vessel market size is predicted to grow from US\$ 51990 million in 2025 to US\$ 68760 million in 2031; it is expected to grow at a CAGR of 4.8% from 2025 to 2031.

A Pressure Aging Vessel (PAV), also known as a Pressure Aging Bomb (PAB) or Pressure Aging Vessel (PAV), is a specialized piece of equipment used in the testing and analysis of asphalt binder materials. Asphalt binder is a critical component of asphalt pavement, and its properties can change over time due to exposure to environmental conditions, such as temperature and air pressure. The PAV is designed to simulate the long-term oxidative aging that asphalt binders experience during their service life.

The trend toward automation in laboratory testing extended to PAV equipment. Automated PAV systems were being developed to reduce manual labor, improve precision, and enhance safety during testing.
