Pressure compensated drip irrigation is a type of pipe used in agricultural irrigation systems that has the property of maintaining consistent water pressure throughout the entire length of the pipe. This piping design ensures that throughout the irrigation system, each drip head receives the same water flow, regardless of its distance from the water source. This ensures that each plant gets the same amount of water, thereby improving irrigation efficiency and reducing water waste. Pressure compensated drip irrigation pipes are usually made of special materials to ensure stable performance over long periods of use. This type of irrigation system is widely used in agricultural fields such as orchards, vegetable gardens and farmland.
