The pressure pilot valve is a fluid control component that uses a pilot hole or pilot channel to control the pressure of the main channel. When working, the pilot valve is subject to a smaller control pressure, which guides the fluid to flow through the pilot channel, thus controlling the pressure change in the main channel. Pressure pilot valves are usually used to control system pressure regulation to maintain system pressure within a stable range.

The global Pressure Pilot market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
