Pressure-sensitive film, often referred to as pressure-sensitive adhesive (PSA) film, is a type of thin, flexible material that is coated on one or both sides with an adhesive that is sensitive to pressure. This means that the adhesive adheres to surfaces when pressure is applied, typically through the application of light to moderate hand or finger pressure. When the pressure is released, the adhesive no longer sticks, allowing for easy repositioning or removal.

Pressure-sensitive films were in high demand in the packaging industry, especially in the food and beverage sector. They are used for labeling, sealing, and securing packages due to their ease of application and versatility.
