A pressure transducer is a device that converts pressure into an electrical signal. It is also known as a pressure sensor or pressure transmitter. The device measures the pressure of gas or liquid and converts it into an electrical signal that can be read by a computer, monitor, or other device. The signal can then be used to display the pressure on a gauge or to control various processes in industrial or mechanical applications. Pressure transducers are commonly used in industries such as automotive, medical, off-road equipment, and automation.

The global Pressure Sensors, Transducers & Transmitters market size is projected to grow from US\$ 10850 million in 2024 to US\$ 13960 million in 2030; it is expected to grow at a CAGR of 4.3% from 2024 to 2030.
