The tapping hole-opening and plugging equipment is a device used for opening and plugging operations in high-pressure pipeline systems. Its main function is to cut, seal and repair holes when the pipeline is under pressure. The equipment is widely used in the oil, natural gas, chemical, electric power and other industries, especially in the process of equipment maintenance and emergency repairs, which can effectively avoid production stoppage or shutdown and ensure the continuity of the production system. The use of pressurized hole-opening and plugging equipment greatly reduces the downtime in traditional maintenance methods, reduces the risk of production interruption, and improves work efficiency. Especially in high-pressure pipeline systems that cannot be shut down, the pressurized tapping and plugging equipment can perform maintenance and repairs without affecting the normal operation of the pipeline.
