The global Pressurized Core Tennis Ball market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Pressurized core tennis balls are robust and covered with high quality felt. They are a bit slower and don't bounce as high as regular tennis balls, training balls are specially designed for heavy use over a long period and for great performance no matter the surface.

Tennis balls are small spherical objects used in the game of tennis. The main purpose of tennis is to hit the ball on the court and bounce it between two players. They are usually made of hollow rubber and covered with fabric made of wool, nylon, or other materials. Tennis balls usually have a pressurized core that keeps them soft and stretchy. The global tennis market is growing steadily owing to the growing demand from amateur and professional athletes. The growing popularity of the game in emerging markets is expected to further drive the market over the forecast period. Additionally, innovations in technology and materials used for manufacturing tennis balls are expected to further drive the market in the coming years. Advances in tennis ball production technology and the increasing popularity of online retail channels, for example, play a key role in the growth of the global tennis ball market. Additionally, the rising demand for novelty and branded tennis balls is also expected to boost the market growth.
