The global Pressurizer for Nuclear Power Plants market size is predicted to grow from US\$ 460 million in 2025 to US\$ 728 million in 2032; it is expected to grow at a CAGR of 6.7% from 2026 to 2032.

The pressurizer in a pressurized water reactor (PWR) nuclear power plant is the core pressure control component of the primary coolant system. Its primary functions are to establish and maintain the primary system pressure within the normal operating range, accommodate coolant volume expansion caused by temperature fluctuations, provide overpressure protection, and prevent boiling within the main system. In 2025, global Pressurizer for Nuclear Power Plants production reached approximately 52 units, with an average global market price of around 9000 K US\$/Unit. The production capacity of Pressurizer for Nuclear Power Plants reaches 70 units, and the industry's gross profit margin is approximately between 20% and 40%.

Driven by the accelerating global transition to low-carbon energy and the continued growth of installed nuclear power capacity, the market for nuclear power plant pressurizers is experiencing steady development. Ongoing new nuclear power projects are fueling a rising demand for pressurizers—critical components of the primary coolant circuit within the nuclear island. Meanwhile, a large number of operating nuclear power units in Europe, the United States, Japan and other regions are entering the life extension operation and equipment upgrade stage, which is driving the continuous expansion of the pressurizer replacement and renovation market. In recent years, the accelerated commercialization of Small Modular Reactors (SMRs) and advanced nuclear reactor technologies has created new market opportunities for these components. Furthermore, continuous technological advancements in areas such as nuclear-grade materials, large-scale forging, automated welding, intelligent inspection,

and digital design have enhanced product safety, reliability, and manufacturing efficiency. Amidst rising demands for energy security, increased investment in nuclear power, and the growing localization of nuclear equipment, the market for nuclear power plant pressurizers is poised to evolve toward larger capacities, higher reliability, extended service life, intelligent manufacturing, and modular designs.
