Prestressed Concrete (PC) Steel Bar is a high-strength, low-relaxation grade prestressed steel material. It is made by cold processing low-alloy hot-rolled round wire rods, quenching by high-frequency induction heating to form a martensite structure, and then tempering by medium-frequency induction heating to form a tempered troostite structure. It is specially used for prestressed concrete structures. By pre-applying tensile force to enhance the crack resistance and bearing capacity of concrete components, it has the characteristics of high strength and toughness, low relaxation, strong bond strength with concrete, good weldability and upsetting properties, etc. It is widely used in bridges and highways, building foundations, railways and power facilities.

United States market for Prestressed Concrete(PC) Steel Bar is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
