Pril-series drugs are one of the commonly used antihypertensive drugs in clinical practice, ending with 'Pril', such as perindopril and enalapril. Pril-series drugs are called Angiotensin-converting enzyme (ACE) inhibitors, are medicines that help relax the veins and arteries to lower blood pressure. ACE inhibitors prevent an enzyme in the body from making angiotensin 2, a substance that narrows blood vessels. This narrowing can cause high blood pressure and forces the heart to work harder.
