The global Primary-Side Feedback Main Control Chip market size is predicted to grow from US\$ 291 million in 2025 to US\$ 490 million in 2032; it is expected to grow at a CAGR of 8.1% from 2026 to 2032.

Primary-side feedback controller chips are power management control ICs used in flyback power supplies. They regulate output voltage and current by detecting voltage and current information in the primary winding, achieving constant voltage and constant current control without optocouplers or secondary feedback. These chips are widely used in mobile phone and tablet chargers, power adapters, LED drivers, power tool chargers, low-power household appliance power supplies, and some industrial auxiliary power supplies. Global sales of primary-side feedback controller chips approximately 1.65 billion units by 2025, with an average unit price of approximately US\$0.18 and a capacity utilization rate of approximately 81%. The upstream sector mainly includes wafer foundries, analog and mixed-signal IP suppliers, power device and packaging/testing service providers, and wafer material and photomask suppliers. The downstream sector includes charger and adapter OEMs/ODMs, power module manufacturers, LED power supply manufacturers, household appliance manufacturers, and industrial power system integrators. The industry's gross margin is approximately 33%. In the product cost structure, wafer manufacturing accounts for approximately 42%, packaging and testing for approximately 16%, power devices and peripheral circuit support for approximately 10%, R&D and process platform amortization for approximately 12%, yield losses for approximately 6%, and sales channel and administrative expenses for approximately 14%. The demand list primarily includes fast charging adapters for mobile phones and tablets, power supplies for routers and network equipment, LED lighting power supplies, built-in power supplies for small household appliances, power tool and battery chargers, and auxiliary power supplies for

industrial control. Downstream customers include consumer electronics brands, power adapter and charger OEMs/ODMs, and LED manufacturers... For power supply manufacturers, household appliance manufacturers, and industrial power system integrators, increasingly stringent global energy efficiency regulations, the trend towards high-efficiency miniaturized chargers, the widespread application of fast charging protocols leading to high-efficiency power supply demands, and changing customer needs for lower bill of materials costs and higher system integration (including both technical and cost aspects) all present business opportunities.
