Print Sleeves and Cylinders are essential components in the printing industry, used predominantly in flexographic and gravure printing. Print sleeves are lightweight, interchangeable cylindrical covers made from materials such as photopolymer, rubber, or composite materials. They are designed to fit over a base cylinder or mandrel and serve as the mounting surface for printing plates, allowing for quick job changes and high-definition printing. Print cylinders, on the other hand, are solid, robust components made from steel, aluminum, or chrome-plated materials. In flexographic printing, they act as the base onto which print sleeves are mounted, while in gravure printing, they are directly engraved or etched with the image or pattern to be printed, providing high durability and precision for long print runs. Both elements are crucial for achieving efficient, high-quality, and versatile printing outcomes.
